Automation

Aircomp by Stampotecnica is an Italian company specialized in developing and manufacturing pneumatic components. As true manufacturer, we rely on our strong technical background as well as on our deeply rooted know-how and technology.

Having been processing plastic materials for more than fifty years, our experience turns out to be our competitive advantage in terms of product quality, design originality and production capacity.

Aircomp by Stampotecnica recognises Excellence as distinctive feature of his own corporate philosophy, and also as essential element for achieving his goals. Aircomp by Stampotecnica believes in his work and pays utmost attention to Customers' needs, focusing his activity on them.

The steady development of Aircomp by Stampotecnica sales network on international markets makes us feel really proud and satisfied, besides spurring us strongly towards future steps.

Passion and enthusiasm go along with each member of Aircomp by Stampotecnica Staff when realizing and promoting innovative pneumatic components, which can compete worldwide thanks to their quality and technical features.

# AIR PRE PARA TION

The in-depth experience we have developed in more than thirty years of planning air preparation units is expressed by our comprehensive Aircomp program offering more than ten product Lines from 1/8" to 1" .

Cutting-edge planning methods have been used for the realization of our products, so as to be able to guarantee utmost reliability, high performance and, where relevant, functional modularity.

All our modular Lines offer the option to add accessory modules, such as manual and electrical shut-off valves, or slow-start valves, which are more and more required when developing pneumatic equipment of latest generation.

# VALVES

Aircomp valves program is steadily expanding with new solutions so as to fulfill the requirements of a market that considers the feature "Made in Italy" as an outstanding added value.

Products of latest generation from Aircomp range, such as Multipole Valve Islands Line 150 and Line 160, are true integrated systems, which, thanks to their compactness and versatility, make remarkably easier the whole system designed to control the pneumatic circuit functions.

Moreover, our program offers a wide range of traditional valves both for single use and manifold assembling, from size 15mm to 30mm, coming with several configurations having manual, mechanical, pneumatic and solenoid operation.

# FITTINGS

# INGS

Aircomp fittings program has been designed to meet several requirements in the pneumatic connection field.

Our offer consists of a wide range of Push-in Fittings having cylindrical and conical connections, whereas Traditional Fittings still represent an effective alternative for heavy duty applications.

Along with a complete program of connection fittings from threaded brass, a broad section has been dedicated to Speed Controllers for cylinders and valves, that has been recently widened adding particularly compact models.

Aiming at taking care of details, we have included Ball Valves, Auxiliary Valves and Silencers, which, thanks to their innovative design, join functionality and aesthetics.

# CYLINDERS

Aircomp proposes a wide range of cylinders complying with ISO 6432 and ISO 15552 Standards, besides offering a broad choice of additional versions such as Compact Cylinders, Round Cylinders, Short-Stroke Cylinders.

Business fields having specific requirements such as food industry or zootechnical sector have led us to further expand our program introducing new stainless steel cylinders Lines.

Accordingly, we keep focusing on research of innovative solutions with a view to make the most of thermoplastic technopolymer features, which distinguish many Aircomp products.

Besides a standard cylinders catalogue, Aircomp offers a complete research and development service for the realization of special versions, that can fulfill individual application exigencies.
